Biographical Summary

Professor Aboagye Menyeh

Professor of Geophysics, KNUST

Quick Facts

- **Born:** New Juabeng District, Eastern Region, Ghana
- **Current Position:** Professor of Geophysics, Department of Physics, KNUST
- **Years at KNUST:** 44+ years (1980-Present)
- **Major Honor:** Aboagye Menyeh Complex (College of Science building named in his honor, 2015)
- **Research Citations:** 517+
- **h-index:** 12

Professional Summary

Professor Aboagye Menyeh is a distinguished Ghanaian geophysicist whose career spans over four decades of groundbreaking research, transformative leadership, and dedicated mentorship at Kwame Nkrumah University of Science and Technology (KNUST). His pioneering work on the magnetic properties of monoclinic pyrrhotite (Fe_7S_8) established him as an international authority in mineral magnetism, with his research continuing to influence the field decades after publication.

Beyond his scientific contributions, Professor Menyeh served as the Foundation Provost of the College of Science from 2004 to 2010, a period during which he transformed the institution through strategic vision, international partnerships, and infrastructure development. The naming of the College of Science building as the

"Aboagye Menyeh Complex" in 2015 stands as a permanent testament to his institutional legacy.

Early Life and Education

Born in the New Juabeng District of Ghana's Eastern Region, Aboagye Menyeh demonstrated exceptional academic promise from an early age. He pursued his undergraduate education at KNUST, earning a First Class Honours B.Sc. in Physics in 1980. His outstanding performance led to an immediate appointment as a Teaching Assistant in the Department of Physics, marking the beginning of a lifelong association with the institution.

Menyeh continued his graduate studies at KNUST, completing an M.Sc. in Physics with a specialization in Geophysics in 1984. His exceptional research potential earned him a prestigious Commonwealth Scholarship to pursue doctoral studies at the University of Newcastle upon Tyne in the United Kingdom. Under the supervision of Professor William O'Reilly, he completed his Ph.D. in Geophysics in 1991, focusing on the magnetization process of monoclinic pyrrhotite—research that would define his career and establish his international reputation.

Academic Career Progression

Professor Menyeh's academic journey at KNUST exemplifies steady progression through merit and dedication:

- **Teaching Assistant** (1980-1982): Began career supporting undergraduate physics instruction
- **Assistant Lecturer** (1984-1987): Returned after M.Sc. to teach while pursuing Ph.D. abroad
- **Lecturer** (1991-1995): Full-time teaching and research after Ph.D. completion
- **Senior Lecturer** (1995-2000): Recognition of research excellence and teaching contributions
- **Associate Professor** (2000-2008): Established research group and international collaborations

- **Professor** (2008-Present): Achieved highest academic rank, continued leadership in geophysics

This 28-year progression from Teaching Assistant to Full Professor represents one of the most distinguished academic careers in KNUST's history, achieved entirely through internal promotion based on research excellence, teaching quality, and institutional service.

Research Contributions

Mineral Magnetism

Professor Menyeh's doctoral research on monoclinic pyrrhotite (Fe_7S_8) opened new frontiers in understanding magnetic materials. His experimental studies revealed fundamental insights into domain structures, coercive force mechanisms, and magnetization processes in this important magnetic mineral. His 1991 paper in *Geophysical Journal International* has been cited over 120 times and remains a foundational reference in the field.

Key research achievements include:

- **Domain Structure Analysis:** First detailed observations of domain patterns in synthetic monoclinic pyrrhotite using Bitter patterns and magnetic force microscopy
- **Coercive Force Model:** Developed theoretical framework explaining coercivity mechanisms in fine-grained pyrrhotite particles
- **Thermal Magnetic Properties:** Characterized changes in magnetic properties during heating, with implications for paleomagnetic studies
- **Synthetic Analogues:** Created laboratory-synthesized pyrrhotite samples that enabled controlled experimental studies

Applied Geophysics

In recent decades, Professor Menyeh shifted focus toward applied geophysics with direct relevance to Ghana's development needs:

- **Gold Exploration:** Supervised research on mineral prospectivity mapping in the Kibi-Winneba belt using aeromagnetic, radiometric, and geochemical methods
- **Groundwater Prospecting:** Led geophysical investigations for groundwater resources in the Densu River Basin and Volta Region
- **Environmental Geophysics:** Pioneered use of time-domain induced polarization for solid waste characterization in developing countries
- **Electromagnetic Methods:** Applied electromagnetic techniques to groundwater exploration and environmental assessment

---

Administrative Leadership

Foundation Provost, College of Science (2004-2010)

Professor Menyeh’s tenure as Foundation Provost marked a transformative period for KNUST’s College of Science. He led the transition from the traditional Faculty of Science structure to the more autonomous College system, implementing strategic changes that positioned the College as a leader in scientific research and education in West Africa.

Key Achievements:

- **Infrastructure Development:** Oversaw construction of new laboratories, research facilities, and the building that would later bear his name
- **Research Funding:** Secured over $800,000 in Teaching and Learning Innovation Fund (TALIF) grants and external donations
- **International Partnerships:** Established collaborations with universities in Germany, UK, and across Africa
- **Academic Programs:** Implemented graduate programs that attracted students from across West Africa
- **Faculty Development:** Recruited and mentored junior faculty who have become leaders in their fields

Dean, Faculty of Science (2001-2004)

As the last Dean before the College transformation, Professor Menyeh prepared the groundwork for structural change. He developed the strategic vision that would guide the transition, strengthened research capacity, and enhanced international collaborations that continue to benefit the institution.

The Aboagye Menyeh Complex

In 2015, KNUST's College of Science officially named its main building the "Aboagye Menyeh Complex" in recognition of Professor Menyeh's transformative contributions as Foundation Provost. The naming ceremony, attended by university leadership, faculty, students, and distinguished guests, celebrated not only his administrative achievements but also his lifelong dedication to scientific excellence and institutional development.

The Complex houses the Departments of Physics, Chemistry, Mathematics, and Statistics, serving as the intellectual heart of scientific education and research at KNUST. For thousands of students and faculty who pass through its halls each year, the name serves as a daily reminder of Professor Menyeh's legacy and the standards of excellence he established.

Mentorship and Graduate Supervision

Professor Menyeh has supervised over 20 graduate students, many of whom have become leading researchers and educators in their own right. His mentorship style emphasizes rigorous scientific thinking, international collaboration, and practical applications of geophysical research to Ghana's development challenges.

Notable Ph.D. Students:

- **Dr. David Dotse Wemegah** (Completed 2021): Now Lecturer in KNUST Physics Department, specializing in environmental geophysics and solid waste characterization
- **Dr. Emmanuel Daanoba Forson** (Completed 2023): Researcher in mineral exploration and gold prospectivity mapping

- **Dr. Peter Deatanyah** (Completed 2021): Specialist in electromagnetic radiation assessment and environmental physics

These students have collectively published over 15 papers in international journals, extending Professor Menyeh's research legacy into new areas of applied geophysics.

International Recognition

Professor Menyeh's research has earned international recognition through:

- **Commonwealth Scholarship** (1987-1991): Prestigious UK government scholarship for doctoral studies
- **International Collaborations:** Long-term research partnerships with Newcastle upon Tyne (UK), Munich (Germany), Minnesota (USA), and Toronto (Canada)
- **Citation Impact:** Over 517 citations of his work by researchers worldwide
- **Lake Bosumtwi Project:** Co-investigator on major international drilling project studying impact crater geology
- **Journal Reviewer:** Regular reviewer for leading geophysics journals including *Geophysical Journal International*, *Physics of the Earth and Planetary Interiors*, and *Journal of Applied Geophysics*

Personal Qualities and Legacy

Colleagues and students describe Professor Menyeh as a patient mentor, rigorous scientist, and visionary leader. His ability to balance fundamental research with practical applications reflects his commitment to both scientific excellence and national development. His administrative leadership demonstrated that academic excellence and institutional transformation can go hand-in-hand.

His legacy extends beyond publications and buildings. He established a culture of research excellence in KNUST's Physics Department, created pathways for international collaboration that continue to benefit students and faculty, and demonstrated that African scientists can compete at the highest levels of international research while addressing local development challenges.

Current Activities

Though approaching retirement age, Professor Menyeh remains active in research supervision, departmental service, and mentorship of junior faculty. He continues to serve as an advisor on geophysical research projects and maintains his commitment to developing the next generation of Ghanaian geophysicists.
